## **1.0 Overview**

Twenty-three groundwater samples were collected in support of the investigation at Fort McClellan (FTMC) Parcel FTA-146(7), Motor Pool 3100, 13th Avenue. Samples were submitted to EMAX Laboratories, Inc. for analysis. QC samples consisted of the following types and quantities: 1 field duplicate (FD), 1 matrix spike/matrix spike duplicate (MS/MSD) pair, 15 trip blanks (TB) and 8 equipment rinsates (ER). Analytical summaries cross-referencing sample location, sample number, and contaminants of concern is presented in Attachment A.

One hundred (100%) percent of samples were validated and reviewed in accordance with the USEPA Contract Laboratory Program National Functional Guidelines for Organic Review (EPA, October 1999) for all areas except blanks. Region III National Functional Guidelines for Organic Data Review (EPA, June 1992) were applied to the areas associated with blank contamination. Data qualifiers assigned to results were based on guidance outlined in the referenced documents and the *Installation-Wide Sampling and Analysis Plan (IT, March 2000)* for FTMC.

**Table 1.0-1**  
**Laboratory Data Qualifier Definitions**

Data Qualifier	Laboratory Data Qualifier Definition
B	Analyte detected in method blank at concentration greater than the reporting limit (and greater than zero).
C	Confirming data obtained using second GC column or GC/MS.
E	Analyte concentration exceeded calibration range.
I	Analyte identification suspect. See narrative for explanation.
J	Result is less than or equal to specified reporting limit but greater than the method detection limit (MDL).
P	Analyte not confirmed. Results from primary and secondary GC columns differ by greater than 10 percent
S	Analyte concentration obtained using Method of Standard Additions (MSA).
U	Not detected. The value represented indicates the reporting limit for the analysis.
D	Sample analyzed as a dilution. The result reported has been calculated using the appropriate dilution factor.
No Code	Confirmed identification.

**Table 1.0-2**  
**Validation Data Qualifier Definitions**

<b>Validation Qualifier</b>	<b>Validation Data Qualifier Definition</b>
U	Not detected. The associated number indicates approximate sample concentration necessary to be detected.
No Code	Confirmed identification.
B	Not detected substantially above the level reported in laboratory or field blanks.
R	Unusable result. Analyte may or may not be present in the sample.
N	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise. Considered an estimate.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
NV	Result was not validated.

The Data Validation Summary Report is presented in Attachment B.

## **2.0 Summary**

Data were evaluated to verify compliance with precision, accuracy, representativeness, comparability, completeness, and sensitivity. To verify that project data quality objectives (DQOs) were met, laboratory analytical results and data packages were examined for compliance with SW846 8021B quality control (QC) method criteria. Laboratory nonconformances and discrepancies in the data were also examined to determine their impact on the data. The results of this review are presented in the following sections.

### **2.1 Sample Receipt and Analytical Holding Times**

All sample results generated by the laboratory during this investigation have been reviewed with respect to condition of samples as received by the laboratory, chain-of-custody, and analysis holding times. All coolers were received by EMAX in good condition under proper chain-of-custody.

All extraction and analytical holding times were met.

### **2.2 Rejected Data**

The overall quality of the data was determined to be acceptable with minimal qualifications. No data was qualified "R" or determined to be unusable.

### **2.3 Blank Results**

Descriptions of the type of blank samples which were collected, processed, and evaluated for background and/or process contamination during this sampling are as follows:

- Trip blanks (TBs) consist of aqueous VOC sample vials filled in the laboratory with ASTM Type II reagent grade water, transported to the sampling site, handled like an environmental sample and returned to the laboratory for analysis. Trip blanks are prepared only when aqueous VOC samples are collected and analyzed. Trip blanks are used to assess the potential introduction of contaminants from sample containers during the transportation and/or storage procedures. Trip blanks were sent with all aqueous samples shipped to the laboratory requiring volatile analysis.
- Equipment rinsates (ER) are samples of analyte-free deionized water poured into, over, or pumped through the sampling device, collected in a sample container, and transported to the laboratory for analysis. Equipment rinsates are used to assess the effectiveness of equipment decontamination procedures.
- Method blanks (MB) are used in the laboratory to assess and document any possible contamination resulting from the analytical process. A method blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank shall be carried through the complete sample preparation and analytical procedure.

When target compounds are detected in trip blanks, equipment rinsates and/or method blanks there is increased uncertainty regarding the positive identification of the same constituents in field samples. When this occurs, detections more than five times the associated blank concentration are assumed to be positive detections in field samples. Because of the added uncertainty for certain "common" laboratory contaminants such as acetone, chloroform, toluene, and various phthalates, these constituents are not assumed present until sample concentrations exceed ten times the associated blank value. This is referred to as the 5X/10X rule.

Field sample concentrations were evaluated to determine if the sample results could have been biased by the presence of any contamination measured in trip blanks, equipment rinsate blanks and/or method blanks. Sample data affected by blank contamination are summarized in Table 2.3-1.

**Table 2.3-1**  
**Summary of Blank Contamination**

Sample Delivery Group	Sample Number	Contaminant	Action
10146-06	OCP3003	Toluene	Toluene result for sample OCP3003 was "B" qualified due to MB contamination.

## **2.4 Analytical Precision**

Precision is defined as a measurement of mutual agreement among individual measurements of the same property, usually under "prescribed similar conditions." Analytical precision is calculated as relative percent difference (%RPD) based on the following formula:

$$\%RPD = \left| \frac{(A-B)}{(A+B)/2} \right| \times 100$$

where:

%RPD = Relative Percent Difference

A = original result

B = duplicate result

A high RPD between an original sample and its field duplicate may be attributable to the difference in sample matrix or distribution of the contaminant within the sample, rather than the precision of the collection process. Also, when "estimated" results are reported, there is a potential for increased variability between the primary and duplicate sample results. This occurs because, at low concentrations, the relative difference in results is magnified by the RPD calculation even though the results are comparable in absolute terms. There is also increased uncertainty in the results as the lower limit of detection is approached, due to decreasing analytical accuracy. The RPD calculation cannot be performed in cases where non-detected results are reported with corresponding samples that contain detectable concentrations.

Overall sampling and analysis precision for this task was assessed using field duplicate (FD) samples. Laboratory precision was assessed by laboratory control sample/laboratory control sample duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) recoveries. Results indicate that an acceptable analytical precision was achieved. Table 2.4-1 lists precision acceptance criteria for LCS/LCSD, MS/MSD organic analyses and field duplicate comparisons. Reported results indicate that an acceptable level of analytical precision was achieved.

**Table 2.4-1**  
**Precision Acceptance Criteria**

Field/Laboratory QC Type	Matrix
	Aqueous
Field Duplicate (Organic)	RPD < 35%
BTEX LCS/LCSD and MS/MSD	25%

## **2.5 Analytical Accuracy Assessment**

Accuracy is a measure of the degree of agreement of a result against an accepted reference or true value. Accuracy is expressed as a percent recovery (%R) calculated by the ratio of the measurement and accepted true value as shown in the following equation:

$$\%R = (|X_s - X_u|/K) \times 100$$

where:

$X_s$  = measured value of the spiked sample  
 $X_u$  = measured value of the unspiked sample  
 $K$  = known amount of the spike in the sample

Surrogate recoveries, MS/MSD and LCS/LCSD were used to measure analytical accuracy as described in SW846 8021B. Reported results indicate that an acceptable level of analytical accuracy was achieved.

## **2.6 Data Representativeness**

Representativeness is a qualitative parameter that expresses the degree to which sample data actually represent the matrix conditions. Standardized requirements and procedures for sample collection, handling and analyses were employed to maximize sample representativeness.

Groundwater samples were collected to determine the quality of groundwater in the aquifer.

## **2.7 Data Comparability**

Comparability is a qualitative parameter expressing the confidence with which one data set can be compared with another. By employing well-recognized techniques and accepted standardized methods for sampling and analysis, data comparability was achieved during this sampling event.

## **2.8 Data Completeness**

Completeness is calculated for the aggregation of data for each analyte measured during the investigation of Parcel FTA-146(7), Motor Pool 3100, 13th Avenue. The formula for calculating completeness is listed below:

$$\% \text{ Completeness} = (X_V / X_T) \times 100$$

where:

$X_V$  = number of valid (i.e., non-“R”-flagged) results  
 $X_T$  = number of possible results

Parcel FTA-146(7) goal for completeness is 95% for aqueous samples. The % Completeness for this task is calculated to be 100%.

- % Completeness =  $(92 / 92) \times 100 = 100\%$

## **2.9 Sensitivity**

Sensitivity is defined as the ability of the laboratory's established method detection limits (MDL)/method reporting limits (MRL or RL) to meet project-specific DQOs or site-specific screening levels (SSSL) and or ecological screening values (ESV).

MDL is the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero. MDLs are determined from an analysis of a sample in a given matrix containing the target analyte of interest. The MRL is a threshold value based upon the sensitivity capability of method and instrument. MRLs are normally set at a minimum of two times the MDL. MRLs are adjusted based on the sample matrix, moisture (solids only), and any necessary sample dilutions. The laboratory cannot reliably quantitate values reported above the MDL but below the MRL. Therefore, these analyte values must be flagged as estimated quantities ("J"-flagged).

To evaluate method sensitivity, a general comparison of the laboratory's MDLs/MRLs and the site investigation screening levels (background values, human health SSSL for residential reuse, and ESV) was performed and presented to the FTMC Base Realignment and Closure Team (BCT) (November 1999). The comparison summarized the relationship between the MDL/MRLs and SSSL/ESVs for each parameter typically reported for all of the major analytical methods used at FTMC. The few cases identified where the MDL and/or MRL values exceeded their corresponding human health SSSL and/or ESV were specifically highlighted and explained. It was understood that for these cases, the standard analytical method of analysis was not going to provide MDLs/MRLs, which met human health SSSLs or ESVs without significant uncertainty and the possibility of reporting false negatives. It was generally accepted that standard EPA SW846 analytical methods would provide sufficient sensitivity for data reported and used in the site screening process at FTMC.

## **3.0 Data Usability**

Data quality indicators (DQI) provide an internal guide for control and review to verify that data are scientifically sound, defensible, and of known and acceptable quality. Factors such as precision, accuracy, representativeness, comparability, completeness, and sensitivity were evaluated to determine if the project's DQOs were met. A review of the data revealed that the majority of QA/QC indicators were within acceptable control limits. Any data anomalies encountered during data validation and overall site evaluations have been summarized in the previous sections of this document.

Based on the results of data validation and QA review, IT has concluded that representative samples were collected and analyzed and the results are indicative of the media analyzed. The

data are to be considered representative of site conditions and are usable for their intended purpose.

### **1.0 Introduction**

Level III data validation was performed on 100% of the environmental samples collected for CK10 (Parcel FTA-146). The analytical data consisted of twelve sample delivery groups (SDGs), 10146-01, 10146-02, 10146-03, 10146-04, 10146-05, 10146-06, 10146-07, 10146-08, 10146-09, 10146-10, 10146-11 and 10146-12, which were analyzed by EMAX Laboratories. The chemical parameters for which the samples were analyzed and validated are identified below:

Parameter (Method)
BTEX Organic Compounds by SW846 8021B

### **2.0 Procedures**

The sample data were validated following the logic identified in the *USEPA Contract Laboratory Program National Functional Guidelines For Organic Review* (October 1999) for all areas except Blanks. *Region III National Functional Guidelines for Organic Data Review* (June 1992) were applied to the areas associated with blank contamination. Specific quality control (QC) criteria, as identified in the Quality Assurance Plan (QAP), analytical methods, and laboratory Standard Operating Procedures (SOP's) were applied to all sample results. As the result of the use of Update III SW846 test methods for the analytical data and the application of the CLP guidelines during the validation process, there were instances where specific QC requirements for all target compounds were not defined. This primarily occurred in the organic, Gas Chromatograph (GC) and Gas Chromatograph/Mass Spectra (GC/MS) calibration areas and is due to the fact that the analytical methods are performance-based, and allows the use of average calibration responses, in lieu of, individual responses, which are defined by CLP protocol. In light of applying CLP guidelines to SW846 methods and evaluating the usability of the data during the validation process, specific QC criteria were determined to address all target compounds and are identified in this report for each parameter, as well as, in the validation checklists, which function as worksheets. All completed validation checklists are on file in the Knoxville office. For those analytical methods not addressed by the CLP and Region III guidelines, the validation was based on the method requirements (i. e. SW846, CFR, SOP's) and technical judgement, following the logic of the CLP validation guidelines.

### **3.0 Summary of Data Validation Findings**

The overall quality of the data was determined to be acceptable with minimal qualifications. The only rejected data were samples that were reanalyzed and have more than one set of results

reported. The "R" qualifier was assigned to the samples with more than one set of results to indicate that a given results should not be used to characterize a particular constituent or an analysis for a given sample.

Individual validation reports have been prepared for and the overall results of the validation findings are summarized in this report. The validation qualifier data entry verification report (Attachment 1) is also provided. This is a complete listing of all of the analytical results and the validation qualifiers assigned for FTA-146. It also identifies the "use" column, which indicates which result to use in the event of a reanalysis. A listing of the validation qualifiers and the reason codes, along with their definitions are also found in Attachment 1. The following section highlights the key findings of the data validation for each analysis.

#### **4.0 Analysis-Specific Data Validation Summaries**

##### **4.1 BTEX Organic Compounds by SW846 8021B**

Overall, the data are of good quality and are usable as reported by the laboratory. Data were reviewed for the following:

###### Holding Times

Technical holding time criteria were met for all project samples.

###### Initial and Continuing Calibration

All initial and continuing calibrations associated with the project samples met QC criteria with the following exception(s):

SDG Number	Samples Affected	Compound(s)	Validation Qualifier
10146-11	OCP3012	Toluene	UJ

###### Blanks

The 5X/10X rule for contaminants found in the associated equipment rinses, trip, and method blanks was applied to all sample results. All were found to be acceptable with the following exception(s):

SDG Number	Samples Affected	Compound(s)	Blank Contaminant	Validation Qualifier
10146-06	OCP3003	Toluene	Method	B

### Surrogate Recoveries

All surrogate recoveries met QC criteria.

### Matrix Spike / Matrix Spike Duplicate

MS/MSD analysis was performed for the project samples, and all QC criteria were met.

### Laboratory Control Sample

LCS was performed for the project samples, and all QC criteria were met.

### Internal Standards

All internal standards met QC criteria. No qualification was necessary.

### Field Duplicates

Original and field duplicate results were evaluated and no problems were identified.

### Quantitation

Results quantified between the MDL and the RL, which the lab qualified as “J” were qualified as estimated “J”, unless blank contamination was present or the results were rejected. Results rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as rejected “R”. It should be noted that benzene, ethylbenzene, and total xylene exceeded the instrument calibration range in the original analysis for samples OCP3002 and OCP3008. Reanalysis was performed with acceptable results; therefore, original results were rejected in favor of the diluted reanalyzed results.

***Attachment 1***

***Data Validation Qualifier Entry Verification Report***

## ***Validation Qualifiers***

- U Not detected. The compound/analyte was analyzed for, but not detected above the associated reporting limit.
- J The compound/analyte was positively identified; the reported value is the estimated concentration of the constituent detected in the sample analyzed.
- B The concentration reported was detected significantly above the levels reported in the associated equipment rinse samples and/or laboratory method and trip blanks. (5X/10X Rule was applied).
- R The reported sample results are rejected due to the following:
  1. Severe deficiencies in the supporting quality control data.
  2. Anomalies noted in the sampling and/or analysis process which could affect the validity of the reported data.
  3. The presence or absence of the constituent cannot be verified based on the data provided.
  4. To indicate not to use a particular result in the event of a reanalysis.
- UJ The compound/analyte was analyzed for, but not detected above the established reporting limit. However, review and evaluation of supporting QC data and/or sampling and analysis process have indicated that the "nondetect" may be inaccurate or imprecise. The nondetect result should be estimated.

<b>Reason Code</b>	<b>Definition</b>

***Data Validation Summary Report  
for the Site Investigation Performed at the  
Motor Pool Area 3100, Parcels 146(7), 24(7), 25(7), 73(7), and 212(7)  
Fort McClellan, Calhoun County, Alabama***

---

## **1.0 Introduction**

Level III data validation was performed on 100% of the environmental samples collected at Parcel FTA-146. The analytical data consisted of four sample delivery groups (SDG's), PK314601, PK314602, PK314603, and PK314604, which were analyzed by Quanterra Incorporated. Both soil and water matrices were validated. In addition, an evaluation of the field split data, which was analyzed by the USACE-SAD laboratory is included in this report. The chemical parameters for which the samples were analyzed, are identified below:

Parameter (Method)
TCL Volatile Organics by GC/MS SW-846 8260B
TCL Semivolatiles by GC SW-846 8270C
Metals by SW-846 6010B and 7470A/7471A

## **2.0 Procedure**

The sample data were validated following the logic identified in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines For Inorganic Data Review (February 1994)* and *USEPA Contract Laboratory Program National Functional Guidelines For Organic Review (February 1994)* for all areas except Blanks. *Region III Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses (April 1993)* and *Region III National Functional Guidelines for Organic Data Review (June 1992)* were applied to the areas associated with blank contamination. Specific quality control (QC) criteria, as identified in the Quality Assurance Plan (QAP), analytical methods, and laboratory Standard Operating Procedures (SOP's) were applied to all sample results. As the result of the use of Update III SW846 test methods for the analytical data and the application of the CLP guidelines during the validation process, there were instances where specific QC requirements for all target compounds were not defined. This primarily occurred in the organic, Gas Chromatograph (GC) and Gas Chromatograph/Mass Spectra (GC/MS) calibration areas and is due to the fact that the analytical methods are "performance-based", and allows the use of average calibration responses, in lieu of, individual responses, which are defined by CLP protocol. In light of applying CLP guidelines to SW846 methods and evaluating the usability of the data during the validation process, specific QC criteria were determined to address all target compounds and are identified in this report for each parameter, as well as, in the validation checklists, which function as worksheets. All

completed validation checklists are on file in the Knoxville office. For those analytical methods not addressed by the CLP and Region III guidelines, the validation was based on the method requirements (i. e. SW846, CFR, SOP's) and technical judgement following the logic of the CLP validation guidelines.

### ***3.0 Summary of Data Validation Findings***

The overall quality of the data was determined to be acceptable. The only rejected data ('R' qualified) was due to "poor performing" volatile compounds, which exhibited poor calibration responses in the associated calibration data, and samples that were reanalyzed and have more than one result reported. The R qualifier was assigned to the samples with more than one set of results to indicate that a given result should not be used to characterize a particular constituent or an analysis for a given sample.

Individual validation reports have been prepared for each parameter in each SDG and the overall results of the validation findings are summarized in this report. The validation qualifier data entry verification report (Attachment 1) is also provided. This is a complete listing of all of the analytical results and the validation qualifiers assigned for FTA-146 sites. It also identifies the 'use' column, which indicates which result to use in the event of a reanalysis. A listing of the validation qualifiers and the reason codes, along with their definitions is also found in Attachment 1. The following section highlights the key findings of the data validation for each analysis.

### ***4.0 Analysis-Specific Data Validation Summaries***

#### ***4.1 Volatile Organics by GC/MS SW 846-8260B***

Overall, the data are of good quality and are usable as reported by the laboratory with the exceptions noted below. Data were reviewed for the following:

##### Holding Times

Technical holding time criteria were met for all samples.

##### Initial and Continuing Calibration

All initial and continuing calibrations associated with the project samples met QC criteria, with the exceptions of the following:

- The following demonstrated RRFs below 0.1 in the ICAL and/or CCAL: Non-detects were rejected (qualified 'R'); Positive results were estimated (qualified 'J'); Unless 'B' qualified due to blank contamination.

SDG	Samples Affected	Analyte/Analytes	Validation Qualifier
PK314601	CP0001, CP0002, CP0003, CP0004, CP0005, CP0006, CP0007, CP0008, CP0010, CP0011, CP0012, CP0013, CP0014, CP0015, CP0016, CP0017, CP0019, CP0020, CP0021, CP0022	Acetone and Bromomethane	R/J/B*
PK314601	CP0013, CP0015, CP0019	2-Butanone (MEK)	R/B*
PK314602	CP0024	2-Butanone (MEK), Acetone and Bromomethane	J/B*
PK314603	CP3002, CP3005, CP3007, CP3009, CP3010, CP3011, CP3012	Dibromomethane, Acetone, 1,2-Dibromo-3-chloropropane and 2-Butanone (MEK)	R/J
PK314603	CP3002	Bromodichloromethane	R
PK314603	CP3002, CP3010, CP3011, CP3012	Bromomethane	R
PK314603	CP3005, CP3007, CP3009, CP3010, CP3011, CP3012 ...	Bromochloromethane	R
PK314604	CP3006	Acetone, 2-Butanone (MEK) and 1,2-Dibromo-3-chloropropane	R

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers, assigned due to quantitation.

- The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: Non-detect results were estimated (qualified 'UJ'); Unless rejected (qualified 'R') due to ICAL/CCAL minimum RRF criteria not met; Unless 'B' qualified due to blank contamination.

SDG	Samples Affected	Analyte/Analytes	Validation Qualifier
PK314601	CP0001, CP0002, CP0003, CP0004, CP0008, CP0017, CP0021, CP0022, CP0023, CP0005	Naphthalene, Chloroethane, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Hexachlorobutadiene	UJ/J
PK314601	CP0006, CP0007, CP0010, CP0011,	Naphthalene and Chloroethane	UJ/J

SDG	Samples Affected	Analyte/Analytes	Validation Qualifier
PK314601	CP0001, CP0002, CP0003, CP0004, CP0008, CP0017, CP0021, CP0022, CP0023, CP0005	Naphthalene, Chloroethane, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Hexachlorobutadiene	UJ/J
	CP0012, CP0013, CP0014, CP0015, CP0016, CP0019, CP0020		
PK314601	CP0001, CP0002, CP0003, CP0004, CP0005, CP0006, CP0007, CP0008, CP0010, CP0011, CP0012, CP0013, CP0014, CP0015, CP0016, CP0017, CP0019, CP0020, CP0021, CP0022	Bromomethane	R**
PK314602	CP0024	Bromomethane	J
PK314603	CP3002, CP3010, CP3011, CP3012	Bromomethane, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, Bromoform, Methylene Chloride, Naphthalene, Chloromethane and Dichlorodifluoromethane	UJ/R**
PK314603	CP3005, CP3007, CP3009	Methylene Chloride, Naphthalene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, Hexachlorobutadiene, Dichlorodifluoromethane and Trichlorofluoromethane	UJ
PK314604	CP3006	Methylene Chloride	UJ

\*\* 'R' qualifiers take precedence over estimating qualifiers.

### Blanks

The 5X/10X rule for contaminants found in the associated equipment rinses, trip blanks, and method blanks was applied to all sample results. All were found to be acceptable with the exception of the following:

Note: 'B' Qualifiers were applied to all of the following sample results.

SDG	Samples Affected	Analyte/Analytes	Associated Blank Contamination
PK314601	CP0001, CP0002, CP0003, CP0004, CP0005, CP0006, CP0007, CP0008, CP0010, CP0011, CP0012, CP0013, CP0014, CP0015, CP0016, CP0017, CP0019, CP0020, CP0021, CP0022	Methylene Chloride	Method and/or Equipment
PK314601	CP0003, CP0004, CP0005, CP0006, CP0007, CP0010, CP0011, CP0012, CP0013, CP0015, CP0016, CP0017, CP0019, CP0021, CP0023	Acetone	Equipment
PK314601	CP0003, CP0004, CP0005, CP0007, CP0010, CP0019	2-Butanone (MEK)	Equipment
PK314602	CP0024	Methylene Chloride and 2-Butanone (MEK)	Method and/or Equipment
PK314603	CP3009	Hexachlorobutadiene	Equipment
PK314603	CP3010	Chloroform	Equipment

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers, assigned due to quantitation.

#### Surrogate Recoveries

All surrogate recoveries are within acceptable QC ranges for the surrogates applied with the exception of the following:

SDG	Samples Affected	Analyte/Analytes	Validation Qualifier
PK314601	CP0022	sec-butylbenzene, m-xylene & p-xylene, n-propylbenzene, ethylbenzene, isopropylbenzene, o-xylene, p-isopropyltoluene and naphthalene	J

#### Matrix Spike / Matrix Spike Duplicate

MS/MSD and Laboratory Control Sample (LCS) was performed for the project samples and all QC criteria were met.

### Field Duplicates

Original and field duplicate results were evaluated and no problems were noted except for the following:

Note: Soil-50% criteria applied

SDG	Samples Affected	Analyte/Analytes	Validation Qualifier
PK314601	CP0001-original/CP0008-field duplicate	o-Xylene	J*

\* High RPD's are most likely due to matrix interferences and sample non-homogeneity

### Internal Standards

All internal standards met criteria with the exception of the following:

- All compounds associated with the internal standard listed in the table below were qualified as indicated.

SDG	Samples Affected	Internal Standard Outside QC Limits	Validation Qualifier
PK314601	CP0004, CP0011, CP0015, CP0019	1,4-Dichlorobenzene- d4	UJ/J

### Quanitation

Results quantitated between the MDL and the RL, which the lab qualified as "J," were qualified as estimated 'J' unless blank contamination was present or the results were rejected. Results rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as rejected 'R'.

## **4.2 TCL Semivolatiles by GC/MS SW-846 8270C**

Overall, the data are of good quality and are usable as reported by the laboratory with the exceptions noted below. Data were reviewed for the following:

### Holding Times

Technical holding time criteria were met with the following exception:

- SDG PK314601 - Sample results for CP0002 were estimated 'UJ' due to extraction holding times being exceeded. CP0002 was originally extracted within holding times; however due to laboratory error (noted in the case narrative), surrogate recoveries were

outside of QC limits. Therefore, the sample was reanalyzed and the reanalysis results are the preferred results to report.

#### Initial and Continuing Calibration

All initial and continuing calibrations associated with the project samples met QC criteria with the exceptions of the following:

- The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20:

SDG	Samples Affected	Analyte/Analytes	Validation Qualifier
PK314601	CP0001, CP0008, CP0014, CP0016, CP0020, CP0021	2-Nitroaniline, 3,3'- Dichlorobenzene, 2-methylphenol	UJ
PK314601	CP0005	Benzo(b)fluoranthene, Benzo(k)fluoranthene 2-methylphenol	UJ/J
PK314601	CP0006, CP0007, CP0011, CP0012, CP0013, CP0015, CP0019	3,3'-Dichlorobenzidine, N-nitrosodi-n-propylamine Hexachlorocyclopentadiene	UJ
PK314601	CP0010	2-Nitroaniline, 4-Nitrophenol, 4-Methylphenol, Benzo(k)fluoranthene	UJ
PK314602	CP0024	4-Nitroaniline, Hexachlorocyclopentadiene, 2,2'-Oxybis(1-chloropropane)	UJ
PK314603	CP3002 and CP3011	Hexachlorocyclopentadiene	UJ
PK314603	CP3005, CP3007, CP3009, and CP3012	2,2'-Oxybis(1-chloropropane), bis(2-Chloroethoxy)methane, bis(2-chloroethyl)ether, Isophorone, Nitrobenzene N-nitrosodi-n-propylamine, 2-Nitroaniline	UJ
PK314603	CP3010	Carbazole, 2,4-Dinitrophenol, Hexachlorocyclopentadiene	UJ
PK314604	CP3006	2,2'-Oxybis(1-chloropropane), N-nitrosodi-n-propylamine, Nitrobenzene, 4-Nitrophenol, Hexachlorocyclopentadiene	UJ

#### Blanks

The 5X/10X rule for contaminants found in the associated equipment rinses, trip blanks, and method blanks was applied to all sample results. All were found to be acceptable with the exception of the following:

Note: 'B' Qualifiers were applied to all of the following sample results.

SDG	Samples Affected	Analyte/Analytes	Associated Blank Contamination
PK314601	CP0006, CP007, CP0014, CP0016	bis(2-ethylhexyl)phthalate	Method

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers, assigned due to quantitation.

#### Surrogate Recoveries

All surrogate recoveries met QC criteria.

#### Matrix Spike / Matrix Spike Duplicate

Batch QC, MS/MSD, and Laboratory Control Sample (LCS) were performed for the project samples and all QC criteria were met.

#### Field Duplicates

Original and field duplicate results were evaluated and no problems were identified, with the exception of the following:

Note: Soil-50% criteria applied. Water-35% criteria applied.

SDG	Samples Affected	Analyte/Analytes	Validation Qualifier
PK314601	CP0004-original/CP0017-field duplicate	Benzo(k)fluoranthene and fluoranthene	J*
PK314603	CP3007-original/CP3009-field duplicate	Di-n-butyl phthalate	J*

\* High RPD's are most likely due to matrix interferences and sample non-homogeneity

#### Quantitation

Results quantitated between the MDL and the RL, which the lab qualified as "J," were qualified as estimated 'J' unless blank contamination was present or the results were rejected. Results rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as rejected 'R'.

### **4.3 Metals by SW-846 6010B/7470A/7471A**

Overall, the data are of good quality and are usable as reported by the laboratory with the exceptions noted below.

### Holding Times

Technical holding time criteria were met for all samples.

### Initial and Continuing calibrations

All initial and continuing calibrations associated with the project samples met QC criteria.

### Blanks

The 5X rule for contaminants found in the associated equipment rinse, calibration, and method blanks was applied to all sample results. All were acceptable with the exceptions noted below:

SDG	Samples Affected	Element(s)	Associated Blank Contamination
PK314601	CP0015, CP0019, CP0021	Zinc	Method
PK314603	CP3002, CP3005, CP3007, CP3009, CP3010, CP3011, CP3012	Mercury	Method, Calibration, and/or equipment
PK314603	CP3002, CP3007, CP3009, CP3011, CP3012	Thallium	Method
PK314603	CP3011	Cadmium	Calibration
PK314604	CP3006	Potassium	Equipment

### Matrix Spike / Matrix Spike Duplicate

Batch QC was performed for the project samples and all QC criteria were met with the following exceptions:

SDG	Samples Affected	Element/Elements	Validation Qualifier
PK314601	CP0001, CP0002, CP0003, CP0004, CP0005, CP0006, CP0007, CP0008, CP0010, CP0011, CP0012, CP0013, CP0014, CP0015, CP0016, CP0017, CP0019, CP0020, CP0021, CP0022	Zinc, Chromium, Vanadium, Copper, and Antimony	UJ/J/B*
PK314602	CP0024	Calcium and Antimony	UJ/J

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers, assigned due to quantitation.

#### Laboratory Control Sample (LCS)

All QC criteria were met for the LCS associated with the project sample analyses.

#### Interference Check Sample (ICS)

All ICS % recoveries, where applicable, were acceptable.

#### ICP Serial Dilutions

All QC criteria, where applicable were met.

#### Field Duplicates

Original and field duplicate results were evaluated and no problems were noted.

#### Sample Quantitation

Results quantitated between the IDL and the RL ("B" flagged by the laboratory) were qualified as estimated (J).

### **5.0 Quality Assurance Field Split Sample Data Evaluation**

Data from the quality assurance split samples supplied to IT by the USACE were reviewed for comparability to the original and field duplicate results. Relative percent differences were calculated and the results are summarized in this section.

#### Field split data for SGD PK314601

Note: Field Split Laboratory - Specialized Assays, Inc., Nashville, TN

Original Sample ID	Field Duplicate ID	Field Split ID
CP0001	CP0008	CP0009

Comments:

- Volatiles - Methylene Chloride and o-xylene detected in original and field duplicate (FD); but not detected in the field split (FS). 1,3,5-Trimethylbenzene and naphthalene detected in the original sample but not detected in the FD or FS. Differences are attributed to lack of sample homogeneity, different reporting limits (RL), and/or FS lab does not report results below the RL's.
- Semivolatiles - Several estimated concentrations of various compounds were reported for the original and the FD that were not reported for the FS. Differences are attributed to the FS results only reported if they are above the RL's.

- Metals - The majority of the same elements were detected at comparable concentrations for all samples. Low concentrations of selenium and beryllium reported for the original and FD not detected in the FS. Calcium, magnesium, nickel, and sodium detected in the FS; not detected in the original and FD samples. Differences attributed to the use of different RL's, lack of sample homogeneity, and/or original and FD lab not reporting results below the RL's.

Field split data for SGD PK314603

Note: Field Split Laboratory - Specialized Assays, Inc., Nashville, TN

Original Sample ID	Field Duplicate ID	Field Split ID
CP3009	CP3007	CP3008

Comments:

- Volatiles - No volatiles compounds were detected in either the original, field duplicate, or field split.
- Semivolatiles - Di-n-butyl phthalate was found in the original and field duplicate (FD) between the reporting limit and the instrument detection limits. Di-n-butyl phthalate is a common lab contaminant.
- Metals - Majority of the same metals found in original, field duplicate (FD), and field split samples. Aluminum RPD and %RSD were above the QC limits. Both the original and field duplicate aluminum results were between the reporting limit and the instrument detection limit. Differences attributed to the use of different RL's, lack of sample homogeneity, and/or original and FD lab not reporting results below the RL's.

***Attachment 1:***

***Data Validation Qualifier Entry Verification Report***

## ***Validation Qualifiers***

- U** Not detected. The compound/analyte was analyzed for, but not detected above the associated reporting limit.
- J** The compound/analyte was positively identified; the reported value is the estimated concentration of the constituent detected in the sample analyzed.
- B** The concentration reported was detected significantly above the levels reported in the associated equipment rinse samples and/or laboratory method and trip blanks. (5X/10X Rule was applied).
- R** The reported sample results are rejected due to the following:
  1. Severe deficiencies in the supporting quality control data.
  2. Anomalies noted in the sampling and/or analysis process which could affect the validity of the reported data.
  3. The presence or absence of the constituent cannot be verified based on the data provided.
  4. To indicate not to use a particular result in the event of a reanalysis.
- UJ** The compound/analyte was analyzed for, but not detected above the established reporting limit. However, review and evaluation of supporting QC data and/or sampling and analysis process have indicated that the "nondetect" may be inaccurate or imprecise. The nondetect result should be estimated.

<b>Reason Code</b>	<b>Definition</b>
01	Sample received outside of 4+/-2 degrees Celsius
01A	Improper sample preservation
02	Holding time exceeded
